BASIC-ABSTRACT:

A graft polymer comprises cellulose on which is grafted, replacing the hydrogen atom of a hydroxyl group with a quaternised amino lactam of the formula (I) where R is the residue of the cellulosic polymer; R1 is H or CH3; R2 is a quaternised 4-29C moiety of an amino amide, an amino ester or a cyclic amine having 1 or 2 nitrogen atoms in a 5 or 6-membered heterocyclic ring which is optionally substd. by lower-alkyl; R4 is H or OH and Z = 1-1000. An unsatd. quaternised amino lactam is prepared by reacting a N-halomethyl lactam with a vinyl or acrylic compd. having terminal tertiary amino groups. (I) can be reacted directly with cellulose or can be oligomerised before grafting.

USE/ADVANTAGE - The graft polymer is used in cosmetics, e.g. shampoos. skin cleaners and permanent wave reducing solns., or as a dye fixing additive for hair, fur and pelts.
